

OK DARAM— The First OKB717 Protocol

Project Background

OK DARAM was created by core members of the original DARAMteam. With strong whale backing and deep OKB ecosystem participation, OK DARAM combines **meme culture and financial mechanisms** to build a sustainable, community-driven protocol on the OKB chain.

Innovation: OKB717 Protocol

The OKB717 protocol is an upgraded standard inspired by ERC404 that **tightly links NFT rarity with token value**.

It enables a **Meme-NFT Liquidity Engine** where meme momentum drives collectible scarcity and on-chain liquidity together.

Meme-NFT Liquidity Engine

- **Rarity ↔ Value coupling:** Rarer NFTs correspond to greater token value.
- **Market flywheel:** Meme virality → demand → liquidity → higher perceived rarity.
- **Programmatic distribution:** Holder rewards and burn routines can be applied post-launch.

Five-Stage Ladder Minting

Stage	Price (OKB)	Supply Range	Highlights
L1	0.02	< 2000	Ultra-low entry, earliest rare geese.
L2	0.03	2000–4000	Rarity steps up, FOMO builds.
L3	0.05	4000–6000	Mid-stage entry, deeper liquidity.
L4	0.09	6000–8000	High-tier with explosive potential.
L5	0.18	8000–10000	Final batch—mint out and fly.

Tokenomics & Liquidity (Updated)

- **Total Supply:** 17,000 DARAM
- **Public Mint:** 10,000 DARAM across five stages
- **Genesis Liquidity:** 5,000 DARAM+ 500 OKB injected into the initial pool

- **Circulating at Launch:** 15,000 DARAM(10,000 mint + 5,000 LP)
- **Additional Allocations:** Any beyond circulating supply will be transparently communicated via governance updates.

Roadmap

- **Phase 1:** Five-stage mint, LP creation with 5,000 DARAM+ 500 OKB, community bootstrap
- **Phase 2:** Activate holder rewards and burn routines; expand secondary markets
- **Phase 3:** Partnerships, cultural memes, and ecosystem integrations on the OKB chain

Mint Information

- **Start Time:** August 25, 21:00
- **Chain:** OKB
- **Website:** okdaram.xyz
- **Whitepaper:** okdaram.xyz/OK_Daram_Lightpaper.pdf
- **Twitter:** x.com/okb_daram
